In order to design a multi-stage steam jet vacuum system individual technical data are required. Please fill in the basic data (if available). Though there are many different designs and applications, the questionnaire is limited to basic data. Further details of your special application can be discussed individually. Please contact us.

Design data

suction pressure

*

*

→

suction medium

suction flow

kg/h

*

suction flow temperature

°C

molecular weight

kg/kmol

discharge pressure

→

(if not specified we will use atmospheric pressure)

operational mode

continuous

discontinuous

volume to be evacuated

m³

evacuation period

min.

final suction pressure

→

Available medium

motive steam

condition

pressure

bar (abs)

medium

cooling water

temperature

°C max.

medium

* Type of condenser

surface condenser

process

installation

mixing condenser

process in vessel

installation vertical

Type of final stage (compression to atmospheric pressure)

ejector

liquid ring vacuum pump

voltage

frequency

Type of installation

barometric (condensers in a height of min. 11 m)

non-barometric

additional comment (optional)

* mandatory field

Constructive requirements

material

ejectors

condensers

liquid ring vacuum pump

*

*

*

construction (optional)

ejectors

condensers

liquid ring vacuum pump

connections, type, pressure range

design code

installation site/country

General information (optional)

area and range of application

comment

* mandatory field

By pushing **send** the questionnaire will send to company FED via e-mail.
You will receive an answer as soon as possible.
